OBJECT : OTK NEW ADJUSTABLE FOOT BAR

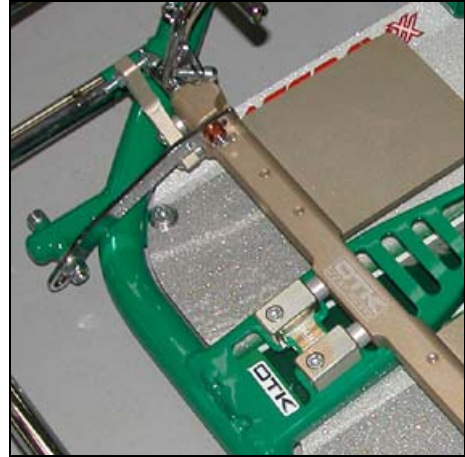

The OTK new adjustable rudder bar in Aluminium, tested by the Tony Kart Racing Team, was realized in order to allow the youngest or the littlest drivers to have the best driving position, optimizing the weight distribution, so that they can have better comfort and can improve their performances.

The rudder bar can be mounted on the new generation chassis only, since it is fixed to the steering column support.

Assembling on the chassis

The brake rod has been modified to allow the correct lining of the pedal with the pump

Inclined brake pump rod
